

How to Connect to ASN Telecom's Network as an RSP

- ASN Telecom provide the connectivity between the RSP's core router in the Data Centre and the home router in each room.
- ASN and RSP interconnect in the DC via cross-connect or Megaport.
- Instead of ordering separate Internet services at each sites, RSP only needs to order one IP Transit service and distribute it to all the sites through ASN's networks.

How to Connect to ASN Telecom's Network as an RSP

ASN Telecom's Data Centre Locations

- Sydney

Equinix SY5, Unit B, 200 Bourke Road, Alexandria, Sydney, AU, NSW 2015 (Megaport available)
